
soundLab Workshop

Make Sound. Build Tech. Have Fun.

June 15-19, 2026

OPEN TO BOTH HIGH SCHOOL AND COLLEGE STUDENTS!

Want to turn a handful of low-cost electronic parts—about the price of a pizza—into real sound and music?

At Duquesne's soundLab Workshop, you'll design, build, and code your own audio gadgets—and take them home.

- **Create synth sounds and sound effects**
- **Program real-time audio in Python & Pure Data (Pd)**
- **Solder, wire, and assemble your own circuits**
- **Learn from musicians, engineers, and makers who have PhDs in their fields**
- **Discover how to model and fabricate custom 3D printed objects**

You'll leave with a bag of electronics, your own custom instrument, and the skills to keep building.

Perfect for high school students or anyone else interested in music, audio tech, engineering, coding, math, or design—no prior experience required.

Work with
Dr. Brian Riordan,
Artist Lecturer in
Electronic Music
at Carnegie Mellon University

LOCATION FOR WORKSHOP:

Electronics labs in Fisher Hall.
soundLab in the Mary Pappert School of Music.

FACULTY:

Dr. Paul V. Miller (Music Theory and Computer Science)
Dr. Michael McMaster (Physics and Electrical Engineering)

DUQUESNE UNIVERSITY
Mary Pappert
School of Music
